

DISTRICT PORTFOLIO

Irrigation Pond Rehabilitation

In August 2005, the District staff completed a project to provide a stable source of irrigation water for irrigating vegetable, fruit and flower crops. Pictures are numbered to show the 3 steps involved in this process. 1) Compacting the sand subgrade. 2) Installing the non-woven geotextile liner. 3) Showing the geo-membrane liner holding water.

Manure Management System

Picture 1) Shows construction of the solid separator building and the storage building. Picture 2) Shows all of the finished buildings. The next step will be to install the separator and associated components.

BEFORE

Fema Funding

AFTER

The Cayuga County Soil and Water Conservation District received funding from the Federal Emergency Management Agency (FEMA) to stabilize an area of the bank of the Owasco Inlet after the severe floods on April 2, 2005.

Owasco Inlet Project

◀ The photo to the left depicts what the bank looked like prior to stabilization. You will notice that the left bank has been washed away.

The photo to the right shows the reconstructed bank that will be planted with trees and shrubs to aid in bank stabilization. The project includes the creation of a sequence of riffles and pools that will create fish habitat. The photo shows a newly created pool that leads into a riffle. ▶
